

i dont know alot about all the laws and such in this area but i really think satellite radio is the most awesome thing to come along in years. I like the satellite radio it is awesome no commericals and people telling me what to buy and all about thier so called specials. This is awesome and now they want to help us comsumers by providing weather and traffic localy and that is awesome its about time someone provides something decent. Local radio provided by the NAB sucks not only are thier weather reports and traffic reports wrong alot of the time they seem to play more and more commercials all the time i hear more commercials then i hear music and that is not why i listen to radio. Thier weather and traffic are not always at the right times i sometimes drive home at rush hour a 45 min drive and never once hear a traffic report and when i do its wrong alot of time. The NAB has no right to control Xm or Sirius radio they are using satellite technology to give us something we have wanted for a long time great radio without all the talk and commericals. Vote against this bill this is wrong the NAB wants to control everything we watch or listen to and i wont let it. STOP THE NAB NOW this is against our first admentment and i for one love that admentment and i am proud to say im american and i love Xm radio and i will not support any goverment burocrat or the NAB in this issue stop the NAB.
